

# Naqi Rizvi

Senior Full Stack Developer

## Summary

Senior Full Stack Developer with a multitude of experience developing high performance, scalable and secure software applications in **React, Node.js, Java (Spring Boot), .NET** using Agile Software Development methods. I have first-hand experience architecting the design and implementation of micro-services and RESTful APIs, building out applications from scratch from the database to the user interface and creating complete automated test suites. I have proven leadership skills through my experience in leading teams and mentoring team members.

## Experience

2018-02 - present

### Senior Software Developer

Scotiabank (Digital Factory)

- Responsible for **leading the team** behind the back-end of the bank's mobile banking application used by **multi-million users** every day
- Actively involved in decision making around **application architecture** and software **development and delivery processes**
- Lead development of **RESTful micro-services** consumed by **iOS/Android/Web** applications to provide day to day banking operations for millions of Scotiabank Customers
- Mentored, trained, and supported junior and intermediate developers on development best practices, documentation, software architecture, design patterns, critical thinking and risk/value assessment
- Independently responsible developing micro-services for Scotiabank including **TransUnion Credit View** micro-service allowing customers to see live credit report information

2017-03 - 2018-02

### Software Developer

Scotiabank (Digital Factory)

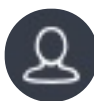

- Developed the online **Credit Card application** for the bank which generated a major, consistent revenue stream for the bank
- Created a **rich front-end experience** using **ReactJS** with a focus on reusable components and accessibility
- Worked with analytics team and various **analytics tools** to ensure correct data points are being stored to measure KPIs
- Developed the **JavaEE service layer** which handled business logic for **customer data validation and credit adjudication**

2017-01 - 2017-06

### Instructor

George Brown College

- Taught a number of front-end development courses** for the Center for Art, Design & Information Technology as well as the Center for Continuous Education at George Brown College
- Courses include introductory to advanced levels of **JavaScript, HTML, and CSS**
- Responsible for creating course curriculum, lesson planning, exercises/assignments, and exams.

## Personal Info

### Address

1574 Jarvie Crescent  
Milton, ON

## Skills

Javascript

Node JS

React

API Design

Microservices

C#/.NET

Java/Springboot

SQL

Team Leadership

Software Architecture

Project Management

- Received 100% rating from students

2016-05 -  
2017-03

● **Full Stack Developer**

Firmex

- Received award for independently **architecting, designing, and developing a RESTful API** for the company’s first subscription based **payment processing micro-service** which is used to process all self-serve subscriptions for the company.
- Lead the development efforts in creating a secured document sharing platform including both front-end and back-end development
- Completed project **within 66% of the originally estimated time**.
- Completed end to end testing covering **unit test and integration tests**.

2015-09 -  
2016-05

● **Platform Developer**

Firmex

- Developed the company’s virtual data room platform using ASP.NET MVC
- Decoupled various components and redesigned the API to be built using SOLID principles making the platform more reliable and secure

2011-05 -  
2012-09

● **Software Developer**

Xerox

- Created manual UAT plans which organized the QA team’s testing efforts and **increased test coverage by around 30%** thereby reducing the chance of undetected bugs going to production
- Converted automated test suite from VB.NET to Java and **decreased automated UI test run-time by almost 40%**

**Education**

2010-09 -  
2015-05

● **York University, Honours BA**
